

ABSTRACT

A method for the preparation of a handleable, flowable coated cottonseed product is provided which involves coating cottonseed with a composition of (a) water or a liquid feed product, (b) a soluble phosphorous source and (c) a metal compound capable of interacting with the soluble phosphorous source to form a coating on the cottonseed, and curing the coating formed thereby, and the flowable cottonseed product formed thereby, as well as its use as a feed supplement for ruminants such as cattle, as a plantable source of cottonseed, and in a method for treatment and/or prevention of urinary calculi or prevention of milk fever in cattle.
